CLEANING HAND ROLLERS & ADHESIVE CLEANING PADS

Description

Our cleaning hand rollers can be used manually in any industry to remove very quickly the various contamination particles, thread, copper scrap, and residues from production process. The results are increased yield and better quality.

The construction of our cleaning hand rollers is made of special polymer cylinder (3.2cm Dia) assembled on high quality bearings for easier and secures rolling. The ergonomic design of the handle (aluminum) reduces the tiredness and its shape repelling the dust; make this tool well suitable to be used in high class clean rooms.

Application areas

Ideal for cleaning artwork, glass, flex circuits, printed circuit boards, copper panels, photo tools, graphic arts, pharmaceuticals, plastics, screen printing, electronics devices, laser optics, or any application where particles should be removed from a flat surface.

How to use our cleaning hand rollers?

Pass the cleaning hand roller over the flat surface to be cleaned. The roller's tacky polymer lifts the particles from the substrate. Clean the dirty roller surface by rolling it directly on the surface of our Adhesive waste pads.
